

Sentry Guard

High Performance Laminated Glass: On Guard Even When You Aren't

TRI★STAR

GLASS PRODUCTS

Using Technology to Create Safety.

Forced Intrusion through windows and other glazed areas in schools and government institutions poses a threat to the safety and security of those inside.

Tristar now offers an alternative to traditional glazing by utilizing Dupont's SentryGlas® Plus interlayer in the laminated glass product **Sentry Guard**

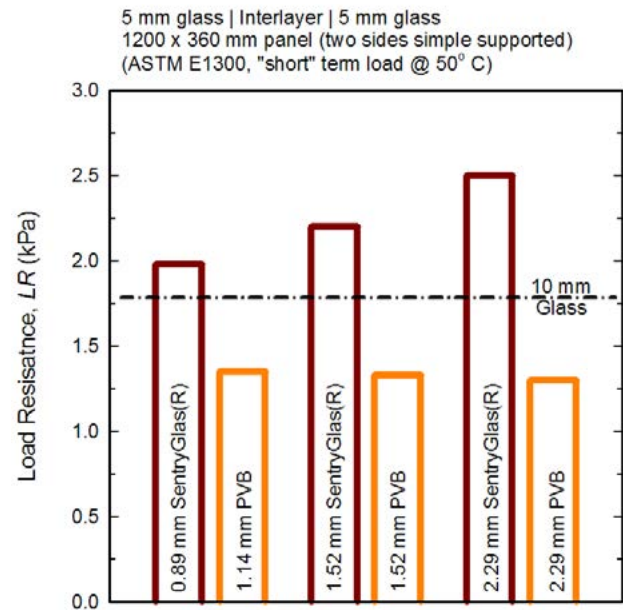

Superior Strength

For Superior Resistance to forced Entry

Tristar's Sentry Guard offers over 100 times the rigidity of standard PVB interlayers. If broken, Sentry Guard Laminates hold their shape and prevent entry until the unit can be replaced.

Add that to Sentry Guard's 5x increase in tear resistance and you have the ideal solution to windows that have traditionally provided little resistance to forced intrusion.

The graph to the right demonstrates how Laminates made with SentryGlas® Plus show increased load resistance (strength) over PVB laminates and monolithic glass for all constructions.
